CATEC Rumen Plus

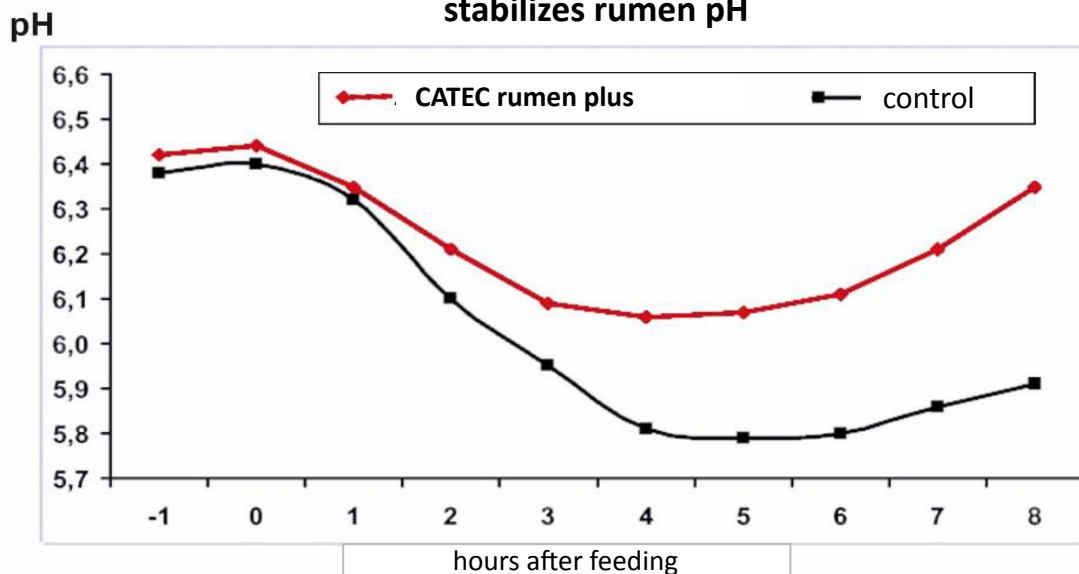

Complementary feed for dairy cows

Only a functional rumen breaks down nutrients and converts them to the extent that dairy cows can perform well. For example, a cow with 50 kg of daily milk must be provided with 7 kg of short-chain fatty acids, 3 kg of microbial protein and 3.5 kg of glucose from the forestomach system. Maintaining the health of the rumen biosystem is therefore the most sustainable and effective measure in dairy cow feeding!

The unique combination of yeast, vitamins, electrolytes and organically bound selenium makes **CATEC Rumen Plus** an indispensable component of high-performance rations suitable for ruminants in the early lactation and dry period.

CATEC Rumen Plus

With 50 g of **CATEC Rumen Plus** per day or 1% in milk performance feed, the rumen function is optimally supported, especially with high amounts of concentrated feed in the ration:

- Higher feed and dry matter intake
- Higher synthesis capacity of the rumen microbes
- Better utilization of nutrients and vitamins

Through this:

- Higher milk yield
- Functioning metabolism - less acidosis
- Better pregnancy rates
- More milk ingredients
