Catec Tox Afla

Toxinbinder for cattle

Toxin binder for cattle

Binds, destroys and restrains Toxins

Animal Species:

dairy cows and beef cattle

Feeding recommendation:

80-100g Catec Tox Afla per animal and day

Packaging:

20kg bags

Minimum shelf life:

12 months

Catec Tox Afla

Mycotoxins are toxic metabolism products which are produced by huge quantities of mould fungus on field or during storage. The results of a banked infestation of the feed with Mycotoxins include irregular estrus or fertility problems as well as growth losses by bovine fattening.

Bentonite is an EU-proven substance to reduce the contamination of feed with mycotoxins of type AFLATOXIN B1. Binding capacity of Bentonite for aflatoxin B1 is more than 90%!

The risk for a crosscontamination of milk to Aflatoxin B1 is strongly decreased by using Catec Tox Afla. It also improves the feed quality thereby avoiding growth crease through feeding feed containing afla toxins and insuring and protecting health of the animals.
