LAYING HENS

The foundation for a successful laying period is laid in the feeding of pullets. It begins with a granulated chick starter, **"CATEC Chick start"**, which is precisely tailored to the protein and amino acid requirements of the young chicks.

The chick starter is used until the 8th week of life.

Once the animals have reached a weight of around 1.8 kg, they can switch to the laying feed **"CATECLegeallein"**.

When laying starts, the animal must be provided with enough food and water ad libitum to achieve the desired eggshell quality and an adequate calcium supply must be ensured.

ALTERNATIVE FEED TYPES

„CATEC Poultry Start Special“ as starter food

„CATEC Poultry happiness“ as laying food

Complete food

CATEC Chick start crumbled

Art.Nr.: 2921101

Feed consumption approx. 2 kg / animal total (1st - 8th week)

**CATEC Legeallein floury
pressed crumbled**

Art.Nr.: 2931150

Art.Nr.: 2931155

Art.Nr.: 2931151

120 g / animal / day - 3.6 kg / animal / month

Feed consumption 1 bag (25 kg) covers the monthly requirement for approx. 6 laying hens

Supplementary food

CATEC Legekombi 35 crumbled

Art.Nr.: 2840001

35% laying combination 35 + 65% maize (wheat)

Feed consumption monthly requirement for 10 laying hens approx. 15 kg laying combo + 25 kg (corn, wheat)

CATEC Legekombi 50 crumbled

Art.Nr.: 2841011

50% laying combination 50 + 50% maize (wheat)

Feed consumption monthly requirement for 10 laying hens approx. 10 kg laying combo + 20 kg (maize, wheat)

Universal feed for all poultry species

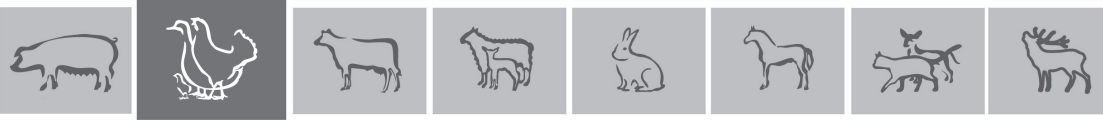

CATEC Geflügelglück

Art.Nr.: 2931175
