AGROCARE

SPECIALTY POULTRY

The importance of specialty poultry is constantly increasing and therefore we pay close attention to the individual needs of each animal. „**CATEC POULTRY START SPECIAL**“ is presented as a starter feed for demanding chicks such as ornamental poultry, guinea fowl, ducks and geese for free intake from the 1st day of life. It is offered in granulated form to ensure safe feed intake and thus trouble-free chick rearing.

For ducks and geese, we offer a special feed for waterfowl from the 4th week of life. With „**CATEC DUCK & GOOSE FEED**“ the animals' nutritional needs are met.

From the 3rd week of life, quails are fed with „**CATEC QUAIL FOOD**“, which is specially designed to meet their needs.

Pheasants are raised with the special starter „**CATEC Pheasant & Quail Rearing**“, which optimally covers the protein requirements.

In order to ensure that the hens are well cared for later in the laying period, „**CATEC LEGEALLEIN**“ is used.

ALTERNATIVE FEED TYPES

„**CATEC Poultry happiness**“

universally applicable for all game birds

Complete food
