## Catec Yeast plus 50

Supplementary feed  
for cattle and poultry

### Ingredients:

Crude protein 50,0 %  
Crude fat 3%  
Crude fiber 2,5 %

### Animal species:

Dairy cows, beef cattle, poultry

### Recommended Use:

Beef cattle: 10-50g/animal/day  
Dairy cows: up to 50g/animal/day  
Poultry: up to 5% in starter feed

### Packaging:

25kg bags

### Shelf life:

12 months

## Catec Yeast plus 50

Maintaining rumen health and promoting rumen flora is the most sustainable and effective approach to cattle feeding. The inactivated yeast blend contained in Catec Yeast plus 50 has a wide range of effects on ruminants: it improves rumen function, increases nutrient digestibility, and thus improves the environment for the desired microorganisms. This leads to increased performance (more milk, higher gains) and animal welfare.

For broiler poultry, the need for highly digestible proteins at the beginning of the fattening period is crucial. The use of Catec yeast plus 50 in broiler starter feed improves protein quality, ensuring the optimal start for young chicks in the fattening phase. Catec yeast plus 50 can replace soybean meal in the ration at a ratio of approximately 1 to 1.3.
